Correlation Diagrams of Speed and Load Capacity
 With the RCP3 series, due to the characteristics of the pulse motor, load capacity decreases as the speed increases. Use the chart below to confirm that the desired speed and load capacity requirements are met.

- POINT**
Notes on selection
- (1) The payload is the value when operated at 0.2G acceleration. The acceleration upper limit is the value indicated above.
 - (2) Cannot be used in the horizontal orientation with the slider facing to the side or in the vertical orientation.
 - (3) Service life decreases significantly if used in a dusty environment.
